Is this a "Fast & Focused" Search Request? (Circle One) YES NO

A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC3600 and on the EIC3600 NPL Web Page at <http://ptoweb/patents/stic/stic-ic3600.htm>.

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

Invention: A tablet dispensing machine comprising a wheel with a series of distribution channels. The channels have a set of spring loaded push pins that are cam actuated to open and close the channels to permit the tablets to access the channel or have the channels block the pins. The cam is located in the over which the wheel rotates. The cam may be under computer control to control and activate the cam and in turn the pin.

## Voluntary Results Feedback Form

➤ I am an examiner in Workgroup:  Example: 3620 (optional)

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature  
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

**Comments:**

Abstract (Basic):

... a drug in the multiparticulate form into the oral cavity of a patient, comprising an **outlet** for **delivering** the multiparticulates and an inlet for receiving the multiparticulates. (A) protrudes downward from the device...

... **delivery conduit** (7...

... **delivery outlet** (8

Technology Focus:

... Preferred System: The device comprises **drum**, a reservoir with several external cavities and multiparticulates, a **rotatable member** outside the reservoir, a stationary retaining housing immediately covering the **rotating member** outside the reservoir, a movable plate having a filling hole disposed in it, a mouthpiece...

...The **drum** has an inner cavity disposed in it for containing the multiparticulates, an outer lining, a...

...the second position upon actuation and the unit dose is expelled from the device. The **rotatable member** has an external cavity in communication with the exit hole when the member is in...

...that the unit dose is delivered from the reservoir to the dispensing hole when the **rotatable member** is moved from its first position to the second position upon actuation and the unit...

...The retaining housing has a dispensing hole disposed in it. The **rotatable member** is in such a position that one external cavity is in communication with the exit...

...The **rotatable member** is rotatable to advance each cavity to the exact position of the next adjacent cavity...

...the filling hole is in communication with the exit hole of the reservoir and with **dispensing** hole respectively and the unit **dose** is **dispensed** from the **device**. When the movable plate is rectangular/circular, it slidably/rotatably moves upon actuation from the...in shape having side walls which extend outward from the inlet at opposite angles to **provide** an **outlet** having a larger area than the inlet area where the multiparticles enter (A). The outlet...

... incorporates thrusters which rotate star wheels to discharge drugs from selected containers

...Abstract (Basic): which drugs are discharged through the aperture (2) into a chute by two rotating star wheels (4) mounted on the axles (5). The star wheels are rotated by the downward movement of the thrusters (14), which causes the radial pin on the end of the thruster to slide along a spiral groove in the socket...

...which interacts with the armature (19) fixed to the thruster. The rotation of the star wheels is controlled by an electronic circuit, which selects the required container by an encoding system...

... **APPARATUS** - The containers of drugs are closed by a cover, which remains in place while the drugs are dispensed .

#### Abstract (Basic):

... medicament carrier for containing medicament, has internal dispensing mechanism for accessing medicament and comprising an **opening** station, peeling mechanism, **outlet**, and index ratchet for Indexing pockets of medicament carrier. The internal mechanism further comprises compensating...

... has been received at the opening station. The lid driving mechanism comprises a fixed-diameter **wheel** on which the lid sheet is wound, the **wheel** having an effective winding surface, the diameter of which increases as more lid sheet is wound about the **wheel** ;  
(...

...3) **outlet** in communication with an **opened** pocket through which a user can remove medicament from the opened pocket; and...

...The **medicament dispenser** is refillable by insertion of a replacement cassette containing a **medicament** carrier. The cassette may be replaced when the **medicament** carrier is empty. The **medicament dispenser** is environmentally friendly as the majority of the **device** may be retained and is not disposable. It can be fitted with additional features such

#### Technology Focus:

... is resilient in nature or tensioned and is positioned between the opening station and the **wheel**. It comprises a flexible elongate

arm between the opening station and the **wheel** and about which the lid sheet is feedable. It additionally comprises a spring or a sprung-loaded tensioner between the opening station and the **wheel** . It further comprises a piston head mounted on one end of the spring, about which the lid sheet is feedable, and is positioned at the **wheel** and may further comprise a torsion spring or constant torque device at the **wheel** .

...

...second chamber to receive the base sheet after it has been indexed around the index **wheel** and separated from the lid sheet.

JP 2005506163 W 92 A61J-007/02 Based on patent WO 200335508

Abstract (Basic):

... containing medicament, and an internal mechanism for accessing the medicament. The internal mechanism comprises an **opening** station, peeling mechanism, **outlet** , and index ratchet movable between locked

and **release** positions for indexing in communication with the **outlet**, pockets of medicament carrier.

... 3) **outlet** in communication with an **opened** pocket through which a user can remove medicament from the opened pocket; and...

...The **medicament dispenser** is refillable by insertion of a replacement cassette containing a **medicament** carrier. The cassette may be replaced when the **medicament** carrier is empty. The **medicament dispenser** is environmentally friendly as the majority of the **device** may be retained and is not disposable. It can be fitted with additional features such...

Technology Focus:

... engagement with the blister pocket of the medicament carrier. The lid driving mechanism comprises a **roller**. The index ratchet and/or the lid driving mechanism are operated by an electronic drive...

...Preferred Materials: The **roller** is composed of a polymeric rubber.

Abstract (Basic):

... the incrementing mechanism surrounds the elongate component. A blocking clutch component (22) is in the **channel** and engageable with the conical surface. A **release** mechanism is adapted to disengage the clutch by lifting the clutch component out of engagement...

...B) an injector **device** incorporating an incrementing mechanism to effect **dispensing** a **dose** of **medicament** by inter-action between the elongate component and the piston of a **medicament dispensing** syringe or cartridge...

...For incrementing mechanism for use in injector **device** for **dispensing** a **dose** of **medicament** .

Technology Focus:

... between the conical surface and the elongate component. The clutch component comprises a ball, a **roller** , or a wedge.

...SPECIFICATION distal end 512 of the laser delivery means 502, as  
desired.

In-Line Drug Delivery **Apparatus**

FIG. 13A is a representative isometric view of a preferred embodiment  
of an in-line **drug delivery apparatus** for **dispensing drug** into  
the **conduits** described above where the laser **delivery** cable passes  
through the **drug delivery apparatus** itself. FIG. 13B is a partial  
detail view of the connector of a preferred embodiment...

...CLAIMS the one or more drugs between the connector and the distal end of  
the laser **delivery** means, the one or more **drug conduits** thereby  
**dispensing** the one or more **drugs** adjacent the distal end of the  
laser delivery means.

12. The **apparatus** of claim 11 in which the at least one drug conduit  
comprises:

an annular space...

ABSTRACT WORD COUNT: 101

LANGUAGE (Publication,Procedural,Application): English; English; English

...ABSTRACT blocking assemblies are provided and positioned so that they cooperate with each other along a **medicament** flow **channel** within the **device** in order to **provide** a controlled **dispensing** of a unit dose of **medicament** to the desired remote location. The **medicament** flow channel includes a blocking assembly at its downstream end.

Detailed Description

Detailed Description

... within the body.

U.S. Patent No. 6@283,949 B 1 discloses an implantable **drug** delivery **device** that includes a reservoir, a **dispensing** chamber adjacent to the reservoir, a **dispensing passage provided** along an interior surface of the dispensing chamber, and an actuator for applying a moving compressive force onto the **dispensing** passage. As a compressive force applied by the actuator moves along the **dispensing** passage, **drug** is simultaneously ejected out of the **dispensing passage** into a catheter for **delivery** to the target site, and additional **drug** is drawn into the **dispensing** passage from the reservoir. The size of this type of **device** may limit its applicability when implantation into a small body cavity is desired.

#### English Abstract

There is described a **medicament delivery device** comprising a metering member adapted to **dispense** a measured amount of **medicament**, an actuator (3), a **medicament delivery passage** and a **delivery passage** cover (4) adapted to move from a closed to an open position, characterised in that...

#### Detailed Description

... actuator until a protective cover is removed, but which also permits multiple actuations of the **device**.

Thus, according to the invention we provide a **medicament delivery device** comprising a metering member adapted to **dispense** a measured amount of **medicament**, an actuator, a **medicament delivery passage** and a **delivery passage** cover adapted to move from a closed to an open position, characterised in that the...

#### Claim

1 A **medicament delivery device** comprising a metering member adapted to **dispense** a measured amount of **medicament**, an actuator, a **medicament delivery passage** and a **delivery passage** cover adapted to move from a closed to an open position, characterised in that the...

Detailed Description

Detailed Description  
... where simplicity and ease of use is paramount.

The Applicants have therefore now devised a **medicament dispenser** having a **dispensing** outlet cover in which the actions of the transfer of a **dose** from to a **delivery** position and the opening of the **dispensing outlet** cover to reveal the dispensing outlet are operable in tandem. The **device** is therefore simple and straightforward to 'prime' for use by a patient.

According to one...
